

Get the Qualcomm Atheros Support You Need with Card Access Engineering

Rely on Card Access Engineering For Support Before, During and After the Sale

As a Qualcomm Atheros® Authorized Design Center (AADC), Card Access™ Engineering offers clients needed WLAN hardware, software and regulatory support. See how Card Access Engineering's extensive Qualcomm Atheros experience gets your designs up and running faster.

WLAN Chip Specs

Card Access Engineering provides you with access (under NDA per Qualcomm Atheros' requirements) to the technical product information you need. Determine which Qualcomm Atheros products best meet your application requirements by reviewing Qualcomm Atheros data sheets.

Product Development

Card Access Engineering offers Qualcomm Atheros-designed development boards—with tightly integrated hardware and software targeted to jumpstart your development projects.

With extensive experience designing and developing Qualcomm Atheros-based wireless clients, access points, telematics applications, and other custom wireless applications, Card Access Engineering can also assist with your hardware, firmware and software development.

Pre-Sales Support

As the world's first Qualcomm Atheros Authorized Design Center (AADC), Card Access Engineering helps an expanding group of customers in the medical, telematics, military, government, and commercial sectors with support to bring their products to market on time and on budget.

Design/Regulatory Review

Card Access Engineering offers a trusted second look to check your development efforts with hardware design review services.

When you're ready to get your regulatory certifications in line, the Card Access Certi-Fi™ Process provides easy, turnkey access to help you obtain Modular Regulatory Approvals for your products.

Enjoy faster time-to-market for your Qualcomm Atheros-based designs at a fraction of full-fledged regulatory certification costs.

Technology Licensing

Avoid starting designs from scratch. Card Access Engineering licenses and supports Qualcomm Atheros Technology Licensed-products and information. Speed up hardware / software development with the Qualcomm Atheros' reference design schematics, layouts, Gerbers, BOMs, software source code and documentation you need.

Prototype Manufacturing

Card Access Engineering's contract manufacturing relationships put prototypes into your engineering team's hands—meeting tight development schedules, and low-to-medium-volume prototype run needs.

WLAN Chip Supplier

For chipset samples and low-to-medium volume supply needs, Card Access Engineering has partnered with Qualcomm Atheros-authorized distributor Lian-Mueller to fulfill your manufacturing requirements.

Capable. Reliable. Proven. Trusted.

Founded in 1995, Card Access Engineering is a professional consulting and design firm specializing in developing complex systems technologies and wireless communications products for clients needing:

- Hardware and/or software design services
- RF technology integration into new or existing products
- Custom RF capabilities using commercial-off-the-shelf (COTS) products
- Qualcomm Atheros licensing and development kits
- Accelerated regulatory approvals and documentation
- RF engineering support, expertise and project resources

For over eleven years, Card Access Engineering has been the go-to resource for savvy companies using Qualcomm Atheros RF technologies. World-class organizations in the consumer, enterprise, medical, telematics, industrial and military markets look to Card Access Engineering as a capable, reliable, proven and trusted partner for developing high-performance, low-power, miniaturized, mobilized and ruggedized wireless communications solutions.

Don't wait to get to market! Let us help your team achieve your design objectives. Call or email Card Access Engineering today.
